

## Vibrating Prod/Tool

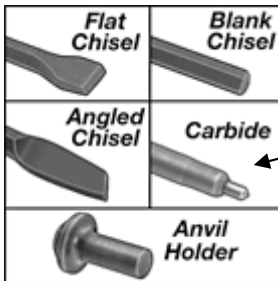

**McMaster Carr** sells the air operated engraver that can be utilized to make a vibrating wand for prodding cattle, without the use of a hot shot or electric prod.

Phone: 330-342-6100

Link: <http://www.mcmaster.com/#1564t68/=3fhywv>

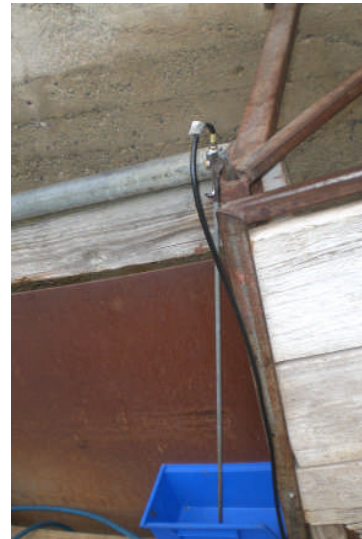

Part 1564T62 Housing Estimated cost \$285.80

Part 1564T68 Carbide tip estimated cost 21.49.

(Note: the tip will need to be cut or filed down to be shorter and less sharp).

The housing can be attached to the end of a stainless steel pipe with the pipe length determined by the operator and situation. The pipe is attached to a regular blow gun valve. Compressed air is necessary to operate the prod/tool.

**Note: It is important to utilize this tool to gently touch on the fleshy area of the rump and allow the vibration to encourage animal movement. It is NOT intended to be used to puncture or poke at the animal. If employees tend to poke animals, a modified (larger and rounded tip) may be required.**
